DETAILED ACTION

Claim Rejections - 35 USC § 102

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless -

(e) the invention was described in (1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent or (2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effects for purposes of this subsection of an application filed in the United States only if the international application designated the United States and was published under Article 21(2) of such treaty in the English language.

- 1. Claims 29 and 34 are rejected under 35 U.S.C. 102(b) as being anticipated by *Ross et al.*, US 5,859,628.
- 2. As per claim 29, *Ross* teaches a charging apparatus for connecting to a communication apparatus (system, 400 for interacting with the automobile computer and connecting to a Global Positioning System, col. 9, lines 57-col. 10, lines 18), said communication apparatus performing data communication via a communication channel (PDA cradle, 104, Figs. 1, 3-5), said communication channel being used to make the connection between said charging apparatus and said communication apparatus, said communication channel including a communication line (Fig. 3,5)for data communication and a power supply line for supplying electric power (col. 4, lines 19-31), and said apparatus comprising a charging circuit for applying electric power, with which it is supplied through said

Art Unit: 2182

power supply line, to a connector of a data processing unit (PDA, 102) driven by a battery (114, Fig.2) installed in said data processing unit, the data processing unit being formed to have said connector in order to input electric power for charging the battery (col. 5, lines 46-48), and said data processing unit being freely attachable and detachable to said connector of said charging apparatus. (Abstract, col. 2, lines 53-col. 11)

3. As per claims 34 and 38, *Ross* teaches a method of charging a battery (114, Fig.4) using a charging apparatus connected to a communication apparatus, which is capable of performing data communication via a communication channel, and using said communication channel to make a connection wherein:

said communication channel includes a communication line for data communication and a power supply line for supplying electric,

said method comprising the steps of:

applying electric power, supplied through said power supply line, to a connector of a data processing unit driven by a battery installed in said data processing unit,

forming the data processing unit to have said connector in order to input electric power for charging the battery, and

charging said battery by the electric power applied. (Abstract, col. 2, lines 53-col. 11)

Art Unit: 2182

4. Ross teaches a charging apparatus in form of a PDA cradle that allows a PDA to be inserted in the cradle in order to exchange information with an onboard automobile computer and provide power for recharging the PDA. The PDA is freely attachable and detachable from the charging apparatus.

Claim Rejections - 35 USC § 103

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.

Claims 35-37 and 39-41 are rejected under 35 U.S.C. 103(a) as being unpatentable over *Ross et al.*, US 5,859,628.

5. As per claims 35 and 39, *Ross* does not teach wherein the communication channel is a cable in accordance with IEEE 1394. *Ross* teaches wherein the communication channel is an IR data link communication channel standard. *Ross* also teaches providing a serial port between the PDA cradle and the vehicle's computer. One of ordinary skill would readily recognize that IEEE 1394 is a well-known communication standard. Therefore, it would not be out of the realm of *Ross* to establish a communication link between the PDA and the vehicle's computer using another well-known communication standard such as . IEEE 1394. Doing so would add and expand the flexibility of *Ross*' system.

Art Unit: 2182

6. As per claim 36 and 40, *Ross* teaches a method of a monitoring circuit via an indictor lamp that show the state of the PDA rechargeable battery, in other words, one of ordinary skill would readily recognize that the indictor could be one color when charging and another color when the PDA is fully charged.

7. As per claims 37 and 41, *Ross* does not teach of the data processing circuit being a digital camera. However, *Ross* teaches that the cradle could receive a cellular telephone as well as a PDA. Therefore, it would have been obvious that a host of other data processing circuits could be received by Ross' cradle and not depart from the claim invention. Further, connecting a digital camera which detachably connects to a cradle which allows the camera to communicate with a computing apparatus is well known in the art, thereby, making use of this device obvious to one of ordinary skill.

Conclusion

Applicant's amendment necessitated the new ground(s) of rejection presented in this Office action. Accordingly, **THIS ACTION IS MADE FINAL**. See MPEP § 706.07(a). Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

A shortened statutory period for reply to this final action is set to expire THREE MONTHS from the mailing date of this action. In the event a first reply is

Art Unit: 2182

filed within TWO MONTHS of the mailing date of this final action and the advisory action is not mailed until after the end of the THREE-MONTH shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of the advisory action. In no event, however, will the statutory period for reply expire later than SIX MONTHS from the date of this final action.

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Tammara Peyton whose telephone number is (703) 306-5508. The examiner can normally be reached between 6:30 - 4:00 from Monday to Thursday, (I am off every first Friday), and 6:30-3:00 every second Friday.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Jeffrey A. Gaffin, can be reached on (703) 308-3301. The fax phone number for the organization where this application or proceeding is assigned is (703) 305-3718. Any inquiry of a general nature of relating to the status of this application should be directed to the Group receptionist whose telephone number is (703) 305-3900.

Mailed responses to this action should be sent to:

Commissioner of Patents and Trademarks

Washington, D.C. 20231.

Art Unit: 2182

Faxes for Official/formal communications intended for entry should be sent

to:

(703) 746-7238, After Final (703) 746-7239

or, for informal or draft communications, to:

(703) 746-7240 (please label "PROPOSED" or "DRAFT").

Hand-delivered responses should be brought to:

Crystal Park II, 2121 Crystal Drive, Arlington, VA, Fourth Floor

(Receptionist).
